

# LCS310 Coin Sorter

The LCS310 Coin Counting and Sorting Machine is especially conceived for the application at smaller and medium banks and at savings-banks, supermarkets, department stores etc.. With this machine, it is possible to count and sort up to nine coin denominations. Foreign coins will be rejected. Coin detection and counting are done by the help of RCDS, the sorting is done corresponding to the coin diameter.

## Recognition of foreign denominations with RCDS

The feature of LCS310 is the RCDS, a coin detection system, which recognizes and rejects foreign coins before they reach the sorting rail. Therefore, jams, sorting and counting mistakes caused by foreign coins are nearly out of the question.

## Intermediate drawers for more reliability

They serve the efficient money processing at the bank teller because they allow the bank cashier to make verifications. After acceptance operator opens intermediate drawer and the coins are dropping down into the collection drawers.

## Clarity and operating convenience

All operation functions are arranged comprehensibly on a clearly structured display. With display of the memory for day total and for numbers and values per denomination (8-digit LED-display).

## Convenient accessories

The LCS310 is equipped with connectors for a second display and an external printer. As an option, a second display, an external printer and an additional device for bagging or tubing coins.

## Technical specifications:

Dimensions:

Height 450 mm (without intermediate drawers)

Height 550 mm (with intermediate drawers),

Depth 300 mm,

Width 660 mm.

Weight: approx. 30 kg (without intermediate drawers)

Approx. 35 kg (with intermediate drawers)

Power consumption: 100 W

Power supply: 230 V, 50 Hz or 115 V, 60 Hz

Counting speed: Approx. 600 coins per minute
