

LCS160 Bank Note Counter

High performance note counter with Magnetic Ink recognition the FF1-60 range has been specifically developed for the UK market to aid in the accurate detection of counterfeit notes. This uses a unique sensor which can pick up the magnetic ink on the UK denominations, the Euro and the Dollar.

Our tests on UK and Euro notes has shown that counterfeits all those tested to date have been located. The same test was done on a Ultra Violet Detector and only 66% of those tested were detected. From tests on the Counterfeit US Dollars we found 30% of them had been marked with Magnetic Ink, however all of these were detected using our Dors m200 US Dollar Counterfeit Detector.

Robust and durable for regular use and minimised service costs.

Easily set batch quantities to assist banking preparation.

Intuitive and easy to use.

LCS160 Detection Methods

MG
Magnetic ink

Capacity and Speed

Capacity in hopper	200 Notes
Capacity in stacker	200 Notes
